

2 PERMANENT ACADEMIC POSTS IN MAGNETIC RESONANCE IMAGING PHYSICS

Do you want to work on the largest imaging project
in the World? Come and join us!

The UK Biobank Imaging Study is a “first of a kind”, significantly larger than any previous imaging study. The unprecedented scale, detail and quality of the project has enabled unique discoveries about the development of many diseases in older age.

The post-holders will work seamlessly across the University of Manchester and the UK Biobank (approximately 50% on each). You will develop a highly competitive program of research linking with your UK Biobank role. This could be related, but not limited, to areas of strategic importance such as technological advances in neuroimaging.

To apply (deadline 28 Feb):
