

JOHNS HOPKINS UNIVERSITY

Three postdoctoral fellowship positions are available in the Cellular Imaging Section, Institute for Cell Engineering and the Department of Radiology at the Johns Hopkins University School of Medicine. We are looking for highly qualified and creative scientists with expertise in non-invasive molecular and cellular imaging. Experience with isolating and characterizing stem-cell derived extracellular vesicles/exosomes will be a major plus. Our lab research centers around the intersections of nanomedicine, immune and stem cell tracking, tracking of extracellular vesicles, magnetic resonance imaging (MRI), contrast agent development, magnetic particle imaging (MPI), and tumor nanotheranostics. When applying, candidates are strongly encouraged to write a short description of projects they like to work on as there is some flexibility. This position remains open until filled.

The successful applicant must have a PhD degree with relevant experience, or will graduate within the next 3 months. A strong publication track record is a must. This position is for a minimum of 2 years with possible extension and/or faculty career advancement depending on performance and funding. Salary level will be commensurate to NIH/JHU pay scales. To apply, please submit your CV, brief personal statement of research interest and career goals, as well as three reference letters to:

Jeff W.M. Bulte, PhD
Director of Cellular Imaging
Institute for Cell Engineering
Division of MR Research, Dept. of Radiology
Johns Hopkins University School of Medicine
