

Nuclear Imaging Scientist

We have an exciting opportunity for a Nuclear Imaging Scientist to join our Pre-clinical Imaging Facility at the University of Oxford.

Our Pre-clinical Imaging Facility provides technical and scientific support for users of a broad range of scanning modalities including MRI, PET/SPECT/CT, luminescence and ultrasound.

This is a full time, 2-year fixed term position.

This role will be an integral part of the imaging team, supporting researchers from across the University, as well as external users.

The post-holder will provide high level support and training for the deployment and use of imaging technologies to develop and deliver research aims and objectives, with a focus on pre-clinical imaging capabilities for PET/SPECT/CT.

It is essential that you hold, or be close to completion of, a PhD/D.Phil in a relevant subject, e.g. biomedical sciences, biomedical imaging, radiopharmacy and have familiarity with PET/SPECT/CT imaging techniques and equipment, as well as handling open-source radioisotopes and preparation/QC of radionuclide imaging tracers.

You will also have experience in maintaining and managing PET or SPECT systems, and have experience with small animal in vivo experiments.

If you are interested in this role and would like more information, please contact Damian Tyler at damian.tyler@cardiov.ox.ac.uk

Applications should be made online. The closing date for applications is 12.00 noon on Wednesday 6th March 2024. Interviews are expected to take place on Friday 15th March 2024.
